Bank Management System UML Diagrams

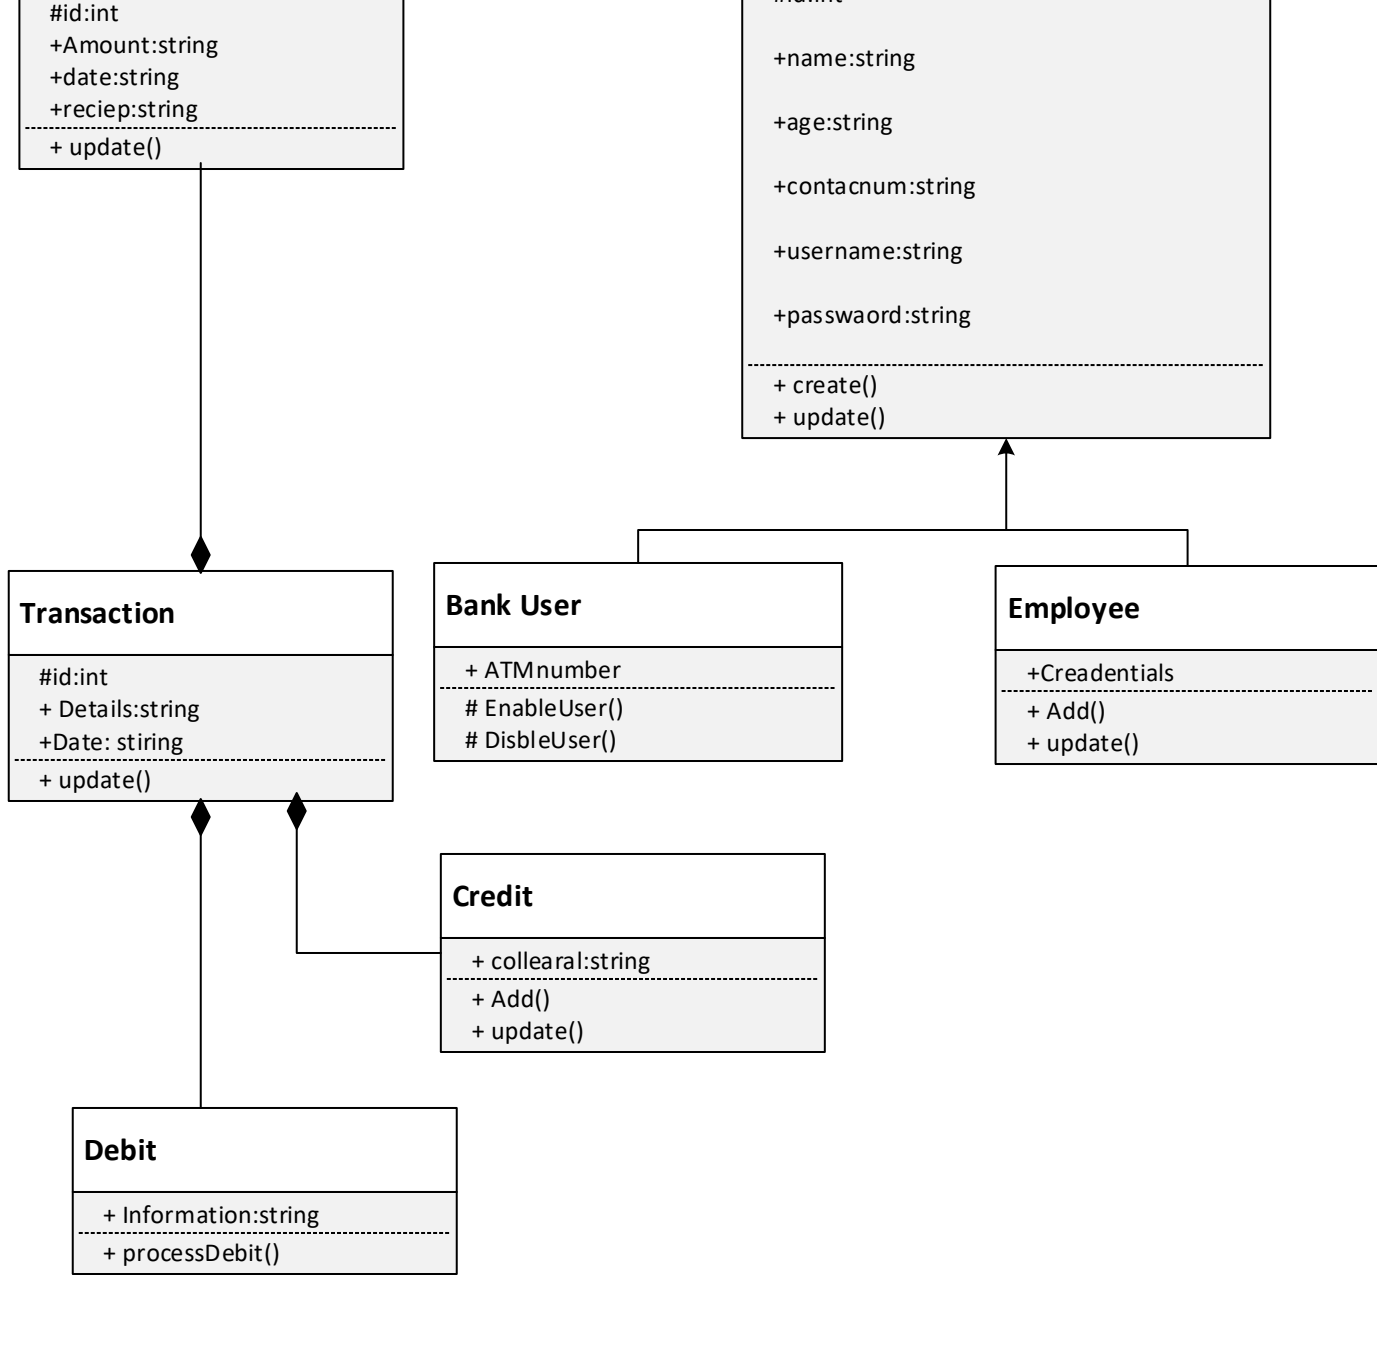

By AS Naeem

The first thing that you must do before building UML Diagrams for the System is to collect as much Bank Management data as you can. You'll need to know how they manage bank information, processing bank transactions and distribution of information. You must complete all the necessary information in order to provide a quality system for them. Then you'll apply the data gathered in designing the UML diagrams.

The purpose of building the system is to provide the Bank employees and owners the easier and efficient way of doing their tasks. And in order to do that, you have to complete the needed diagrams to perfectly furnish your project. Build your project completely using UML Diagrams to help you and keep you from repeating its development.

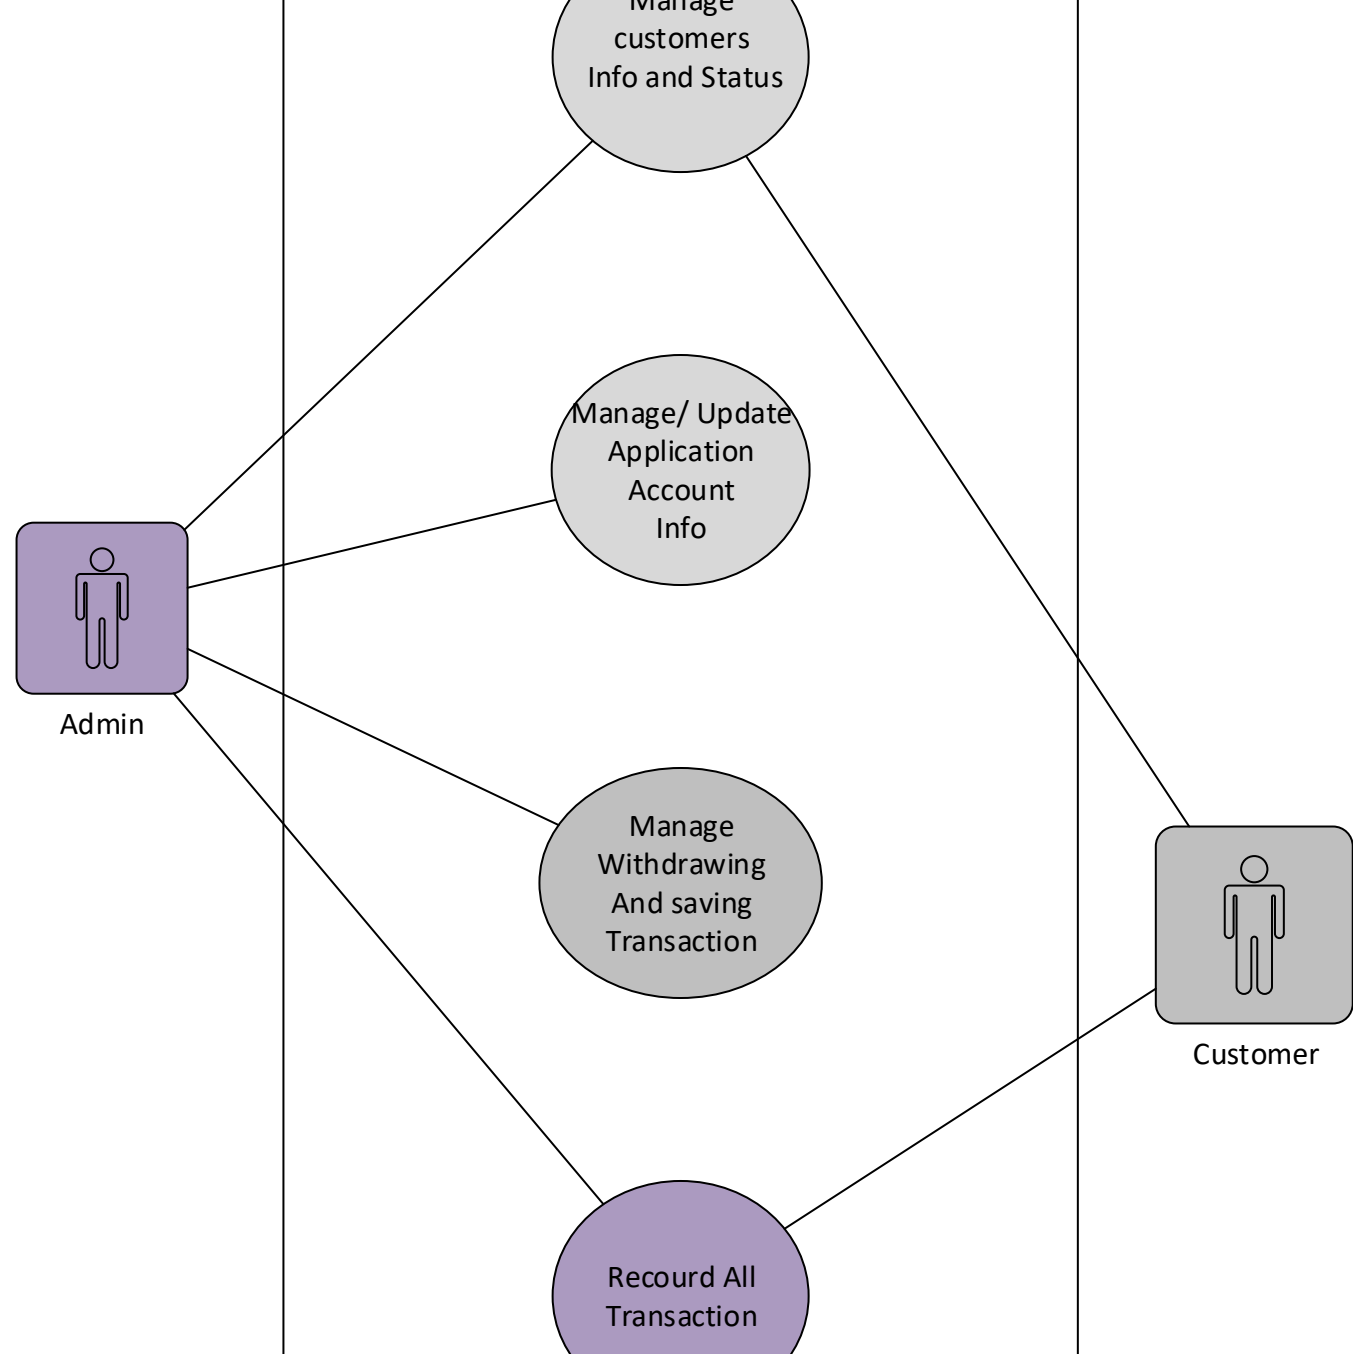

01.Bank Management System Class Diagram

The Class diagram for Bank Management System shows the structures of information or data that will be handled in the system.

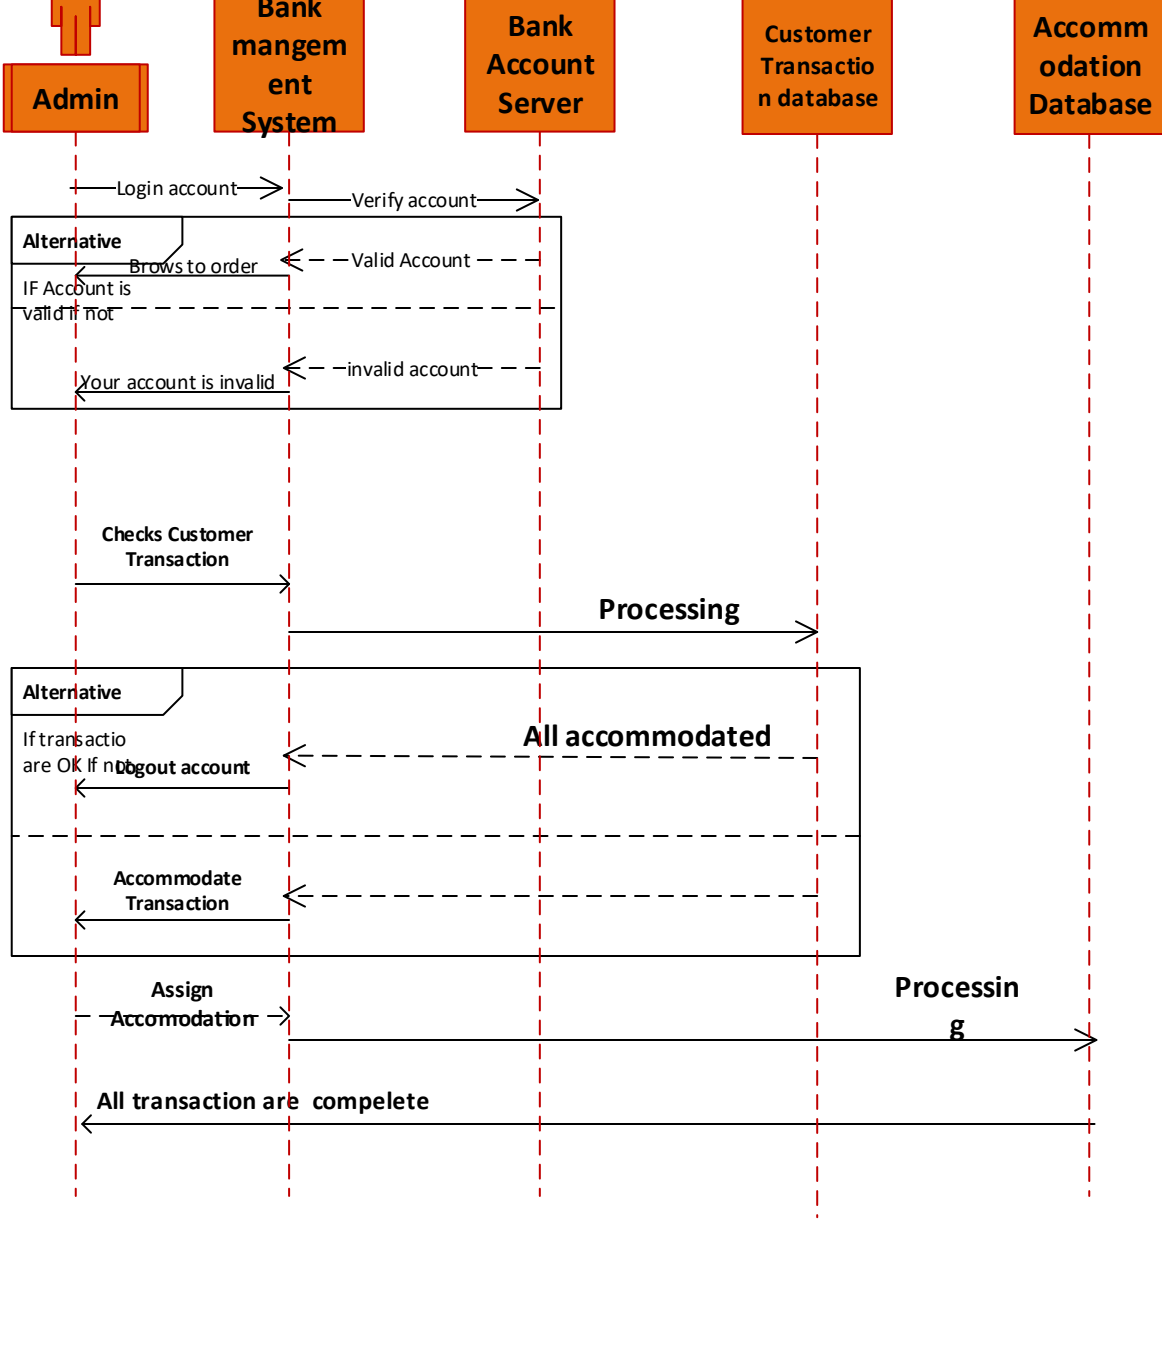

02.Bank Management System Use Case Diagram

The Use Case diagram for Bank Management System shows the structures of information or data that will be handled in the system.
